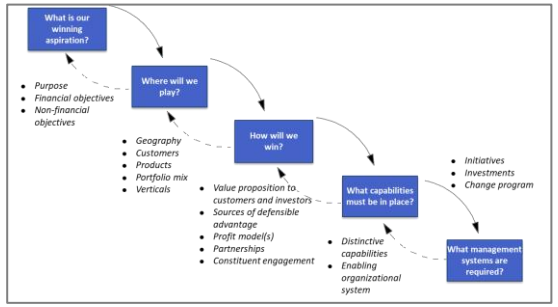
Our accelerators and methodologies

We have a unique set of diverse tools and methodologies that we will use to tailor the outputs for your ask

STRATEGIC CHOICE CASCADE

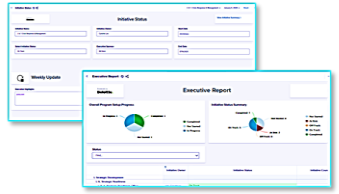
Articulates an integrated set of strategic choices around vision, focus areas, differentiators and winning capabilities, management systems and execution plan



STRATEGY BY DESIGN

Translate Your Strategy

- Define initiatives
- Develop activities and milestones
- Build a financial business case
- Create detailed roadmaps

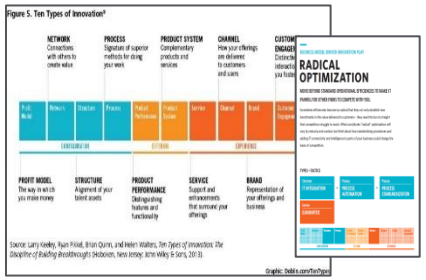


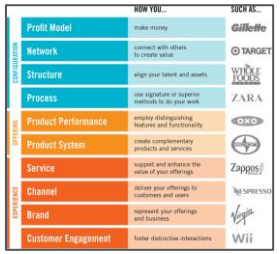
Implement and Operate With Efficiency

- Present weekly status updates
- Mitigate risks and issues
- Share executive updates
- Capture value and manage performance

TEN TYPES & TACTICS

The Ten Types & Tactics of Innovation is a signature approach to ensure the development of breakthrough innovation and inspiration of new and thought-provoking concepts.



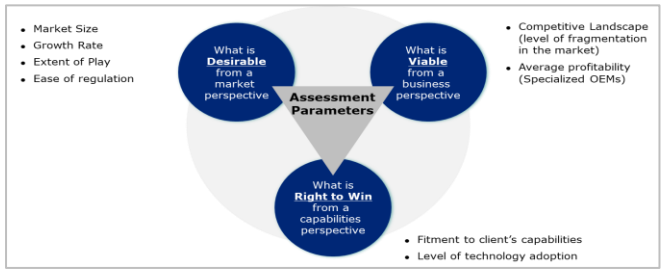


CAPABILITY EDGE

CapabilityEdge™ provides insight on how to operationalize planned business model changes and prioritize change areas. It creates capability maps & assesses capability maturity

BALANCED BREAKTHROUGH

Our balanced break-through framework provides a comprehensive assessment tool that holistically aligns any partner identification to client's strategic requirements and fitment



RESEARCH TOOLS

We will use multiple research tools at our disposal to bolster the partner long-list as well as undertake assessment of the potential partner list while scoring them

Market, competition assessment and Growth strategy

Conducted market, internal and competition assessment for a multispecialty hospital in Chennai looking to drive future growth leveraging its core strengths and developing new avenues

Context

- A multi specialty hospital management desired to undertake market, internal and competition assessment.
- This assessment was to be feed into their internal strategy for next three years for market positioning, services offering, right pricing, right sizing

Approach

- Undertook brand perception exercise to understand customer perception vs peers – on service delivered, recall value, key differentiators – infra, doctor strength, experience
- Conducted a deep dive internal assessment of the hospital performance based on management input and data to understand – core differentiators, growth aspirations in short to medium term, gaps in desired assets and capabilities, key challenges
- Developed recommendations for the brand tenets and growth opportunities to be prioritized with management inputs – procurement optimization, technology advancements, margin mix

Impact

- Successfully provided client with deep, comprehensive peer profile as well as study of market attractiveness and view of customer
- Delivered guidance on capabilities and high-level B-plan including speciality target, doctor mix, patient acquisition channels, procurement practices, pricing model, doctor empanelment practices

GTM strategy for Indian technology MNC in Indian Med-tech space

Go-to-market strategy for an Indian technology MNC aiming to launch an innovative product in medical devices space

Context

- Our client, a leading Indian software services company, engaged Deloitte to develop the go-to-market (GTM) strategy for its new medical device product aimed at creating new market
- The client was looking to conduct a market access research study and formulate the GTM strategy covering value proposition, key geographies to enter, target customer segments, pricing, marketing and promotions, sales cycle and processes and GTM organization

Approach

- Conducted secondary research to outline market and competitive landscape, assess the current market size and addressable opportunity, and identify key states driving candidate demand
- In-depth interviews with surgeons and clinicians, pharma company reps, Govt /NGOs/ Other Sponsors and regulators for feedback on existing products, clinic landscape, pricing, emerging business models, and KOL Mapped the candidate journey to understand key unmet needs, expectations, drop-outs and reasons
- Comparative benchmarking against competitors' offerings to define the value proposition for the client's product, defined target customer segment and conducted pricing analysis
- Created P&L scenarios to simulate the gross margins and breakeven period
- Developed the GTM strategy including the play across the value model, target distribution channels, product packages and pricing, sales and marketing initiatives, sales process and regulatory / compliance needs

Impact

- Critically analyzed the market to identify innovations in creating the market, rather than focusing on market share
- Mapped out an ecosystem play for the client, beyond the product
- Developed detailed implementation roadmap leading up to a launch in FY'21

Market Entry Strategy in India

Market opportunity assessment of the Indian molecular diagnostics market for one of the world's leading IVD manufacturers

Context

- Client, a global major in the IVD space, had acquired a manufacturing company few years ago. Given the opportunity in the molecular diagnostics space , they wanted to explore opportunities for local manufacturing and hence the need to deep dive into the market landscape

Approach

- We performed a detailed assessment of the Indian molecular diagnostics market to arrive at 7 high potential disease areas of focus
- Detailed scan & analysis to map market offerings, user segments, competitor products & price points
- Focused interviews & discussions with industry experts, labs, clinicians, manufacturers & distributors
- Analyzed market insights & research finding to identify current need gaps & understand current & deduce future business dynamics
- Assessed the decision support levers & patterns for public and private procurement of molecular diagnostics to understand preference for locally manufactured products
- Conducted an evaluation of threat from emerging diagnostic technologies

Impact

- Helped the client understand the key competitors' playbook as well as customer preferences around molecular diagnostics; Effort vs impact prioritization matrix helped categorize the 7 high potential disease areas into 'Quick-wins', 'Low hanging fruits', 'Big bets' and 'Long term wins'

New Care Delivery Models and Strategy

Model of wellness and care design for a transformative health system being set-up in the Middle East

Context

- Client wanted to develop a new model of wellness and care that encompassed health by design and health equity in all aspects of care, with delivery through a highly integrated approach

Approach

Benchmarking

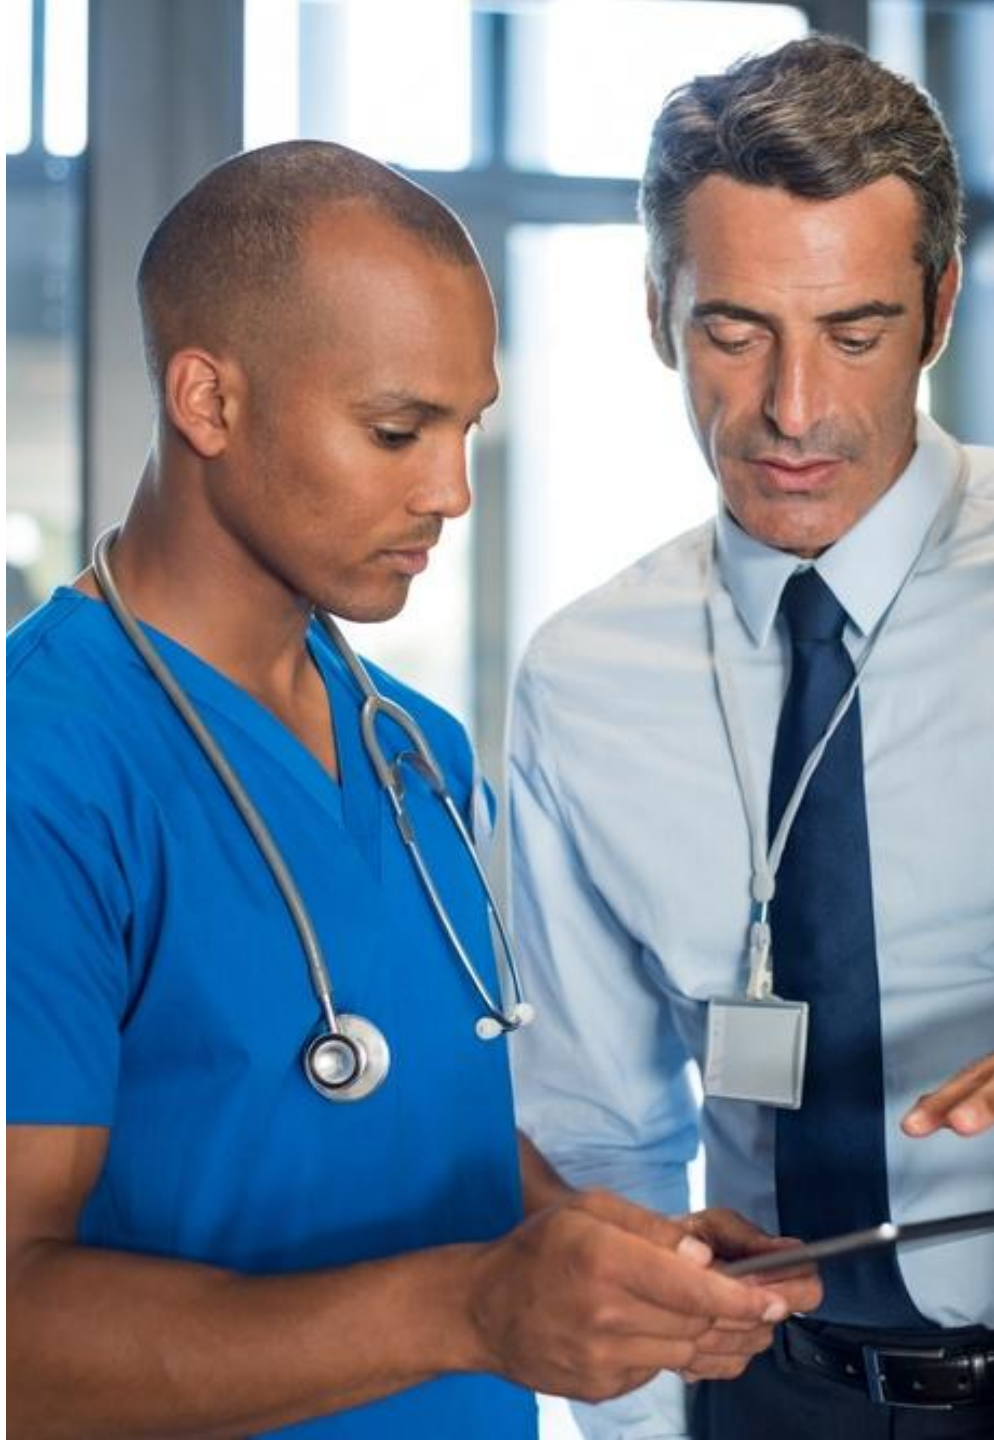
- Conducted study and working group sessions with the client to align on various definitions and objectives for the client's model of wellness and care
- Conducted literature research to identify multiple elements of various models to study best practices to tailor care (home care, virtual care, in-patient care etc.)
- Developed benchmarks basis Deloitte's existing Future of Health work around care models, emerging roles of the various stakeholders and workforce

Design of the model of wellness and care

- Identified principles for ensuring the model of wellness and care delivered client's requirements
- Developed user personas based on demographics, psychographics and needs and likely gaps
- Identified various service delivery touchpoints and the likely role to be played by each touchpoint for an enhanced patient experience within an integrated care pathway
- Developed key workforce requirements and roles to be played to deliver on the model of wellness and care
- Finalized user journey to bring various elements of the new model of wellness and care to life

Impact

- Developed complete strategy and framework for the model of wellness and care
- Created six detailed user personas and journeys to bring various elements of the model of wellness and care to life



India Healthcare and Medicity Strategy for a new entrant

Healthcare sector landscaping, opportunity identification, competitive benchmarking, rollout plan and financial feasibility analysis for a new entrant looking to setup multiple Medicities in India covering multi-specialty hospitals

Context

- The client was a new entrant looking to setup multi city healthcare parks/ Medi cities in India
- Backed by global healthcare companies, the client sought to serve the Indian market with multiple hospital and clinic models
- The client wanted to study the Indian landscape, identify key specialty areas of focus, deep dive into micro markets and understand financial feasibility of the proposed hospitals / clinics

Approach

Growth Strategy

- Analyzed areas of expansion including which cities (8+) and types of models;
- Competition benchmarking on operational and financial aspects
- Prioritized these options and cities based on the attractiveness of the option and the client's ability to execute
- Undertook financial feasibility for each unit capturing capex, revenue and opex along with return ratios to assess attractiveness
- Create a detailed initiative roadmap to implement these identified opportunities

Impact

- Client could identify which models to focus on along with cities to prioritize
- Client got a detailed understanding of the micro market in each of the cities of focus
- Client could finalize strategy on specialties – which ones to focus, doctor engagement model and so on
- Aggregation of all financial models helped the client identify its' 10 year journey and roadmap including investments needed

Market Sizing and Customer Insights for GLP-1 in India for a Medtech MNC

Context

- The client was a leading MNC Medtech device manufacturer, looking for new growth areas to maintain its competitive edge, more recently in the GLP-1 sector, and thus engaged Monitor Deloitte to conduct an in-depth market analysis of the GLP-1 packaging market in India
- The objective of the study was to focus on the 5-year market outlook, drivers, competitive landscape and customer segmentations to understand implications for the client and develop customer segment specific recommendations on the Go-to-Market strategy

Approach

- Analyzed current and historical GLP-1 market dynamics using distributor-level sales data to identify market leaders, emerging trends, and customer purchasing preferences
- Conducted a comprehensive top-down market sizing of the GLP-1 segment in India, segmented by manufacturer, molecule, and packaging format
- Mapped the domestic GLP-1 generic pipeline expected to enter the market over the next five years, including development phase, anticipated indications, and projected routes of administration
- Conducted expert interviews with healthcare professionals to understand end-user preferences and assess the advantages and limitations of various packaging solutions
- Engaged with industry experts to evaluate local manufacturers' packaging preferences, competitive landscape, and existing gaps in GLP-1 injection devices and packaging formats
- Analyzed customer preference drivers and developed target archetype specific recommendations for the client

Impact

- Computed detailed volume and value projections through 2030, segmented by manufacturer, molecule, administration route, and packaging format
- Identified key customer segments and their purchasing preferences to recommend the optimal strategic positioning for the client's product portfolio
- Performed a preliminary export opportunity assessment, evaluating volume and value projections for potential GLP-1 generic exports

Market Expansion Strategy for a MNC Pharma Company in India

Context

- The client, a Japanese multinational company in the pharmaceuticals sector, was looking to expand its presence in the Indian market. It was both a supplier of pharmaceuticals and raw materials as well as a technology provider to other pharma companies & CDMOs
- The client had requested Deloitte's assistance in developing a framework to assess the attractive whitespaces in the pharma value chain from an import, export, distribution and re-export perspective

Approach

- Mapped the flow of products and services in the Pharmaceuticals industry to produce a product and services value chain
- Assessed client's global portfolio and developed a long list of opportunities synergistic to firm's businesses
- Assessed opportunities based on qualitative factors and client preferences and criteria to arrive at a shortlist of opportunities to deep dive into
- Conducted market size estimation for the shortlisted opportunities through secondary research and relevant expert inputs

Impact

- Created a list of opportunities for the client to expand into India based on pharmaceutical value chain analysis
- Developed a comprehensive framework for evaluating the opportunities best suited to client goals
- The client selected Cardiac Sciences as an area of focus in India

Long term vision and growth strategy formulation for a leading Quaternary care hospital in India

Comprehensive vision and strategy roadmap development for a super-specialty hospital in Mumbai, India

Context

- A leading super-specialty hospital in Mumbai wanted to refresh it's more than a decade-old strategy, and redefine its long-term vision to differentiate themselves amidst increasing competition and shrinking catchment area
- Being a trust hospital, the board also sought help in formulating a fundraising strategy to fund their charitable initiatives

Approach

- Conducted deep-dive stakeholder interviews with leadership and doctors to understand legacy vision and future aspirations
- Analyzed Mumbai market, incl. demand evolution in the catchment area & competitive intensity, through secondary research & interview with CXOs from leading Mumbai hospitals
- Reviewed hospital's current market positioning, and performance with respect to various patient segments to help them refine their positioning with respect to competition
- Benchmarked the hospital's performance across specialties at sub-specialty levels and analyzed future trends to identify priority specialties for capital & space allocation
- Assessed global healthcare funding models, including innovative approaches such as Donor-advised Funds, membership-based priority cares, etc.

Impact

- Client revised its vision and mission statement to become future ready and competitive
- Client formulated a hospital 2.0 strategy & roadmap incl. identification of focus specialties and growing subspecialties and niches within them for future investment
- Client identified 4–5 philanthropic funding models to formulate a targeted outreach strategy for CSR and institutional donors in order to expand charitable care

Proposal 2

Assessing a rare disease market entry to build a niche for VPS Lakeshore in the highly competitive Delhi NCR market

Market Context

Rare diseases in **large populous markets like India** are increasingly being unlocked by **advances in diagnostics and awareness initiatives**

Key enablers include:

- **Rapid adoption of advanced diagnostic modalities** (genetic testing, newborn screening, precision diagnostics)
- Growing **clinical awareness** and referral pathways among physicians
- National and state-level **policy initiatives** improving identification and treatment access
- **Rising patient and caregiver awareness**, leading to earlier diagnosis and longer treatment journeys

Together, these trends are structurally expanding the diagnosed and addressable patient pool, transforming rare diseases from an under-recognized burden into a scalable care opportunity

Strategic Context

VPS Lakeshore is evaluating entry into the rare diseases segment in India as part of its broader shift towards specialized care models

- Rare diseases are being assessed as a **focused strategic platform, rather than a peripheral service line**, given their strong clinical and operational links with:
- Genetics and genomic diagnostics
- Hemato-oncology and complex tertiary care
- Long-term, multidisciplinary patient management

This evaluation is anchored in **building a center of excellence** that can deliver differentiated outcomes in complex and under-served disease areas.

Point of View

Rare Disease Market in India

Copyright © 2026 Deloitte Touche Tohmatsu India LLP. All rights reserved.

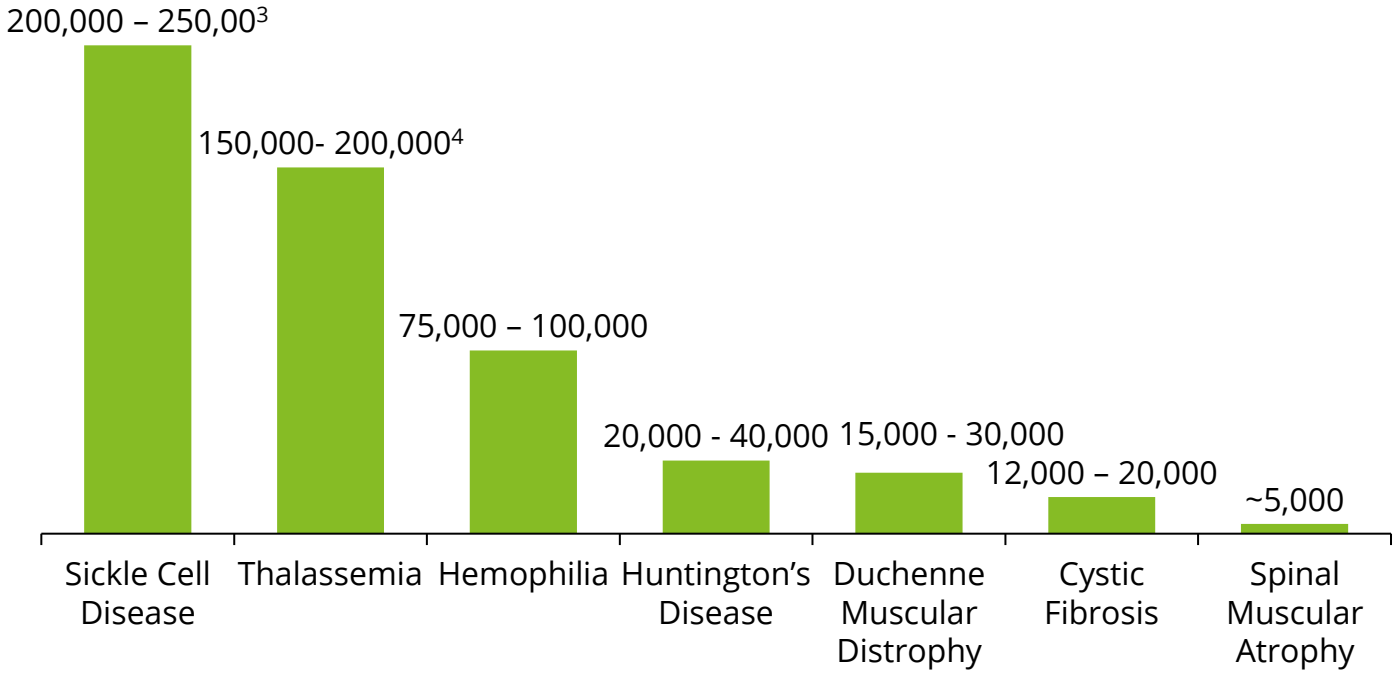
Monitor Deloitte.

Landscape of Rare Diseases

Rare diseases in the populous are being unlocked by advances in diagnostics and awareness initiatives

WHO defines rare disease as often debilitating lifelong disease or disorder with a prevalence of 1 or less, per 1000 population

Number of patients in India[1]



With increasing awareness, expanded newborn screening, and improving diagnostic infrastructure, detection rates for rare diseases are expected to rise significantly, leading to a structural increase in the addressable patient pool (diagnosed + treated patients)

Key Drivers of rare diseases in India

Large Undiagnosed Patient Pool

India is estimated to have a rare disease **patient pool of 72 to 96 million[2]** but is vastly undiagnosed due to **lack of awareness** and **Infrastructure**

Genetic Factors

~80% of the rare diseases are genetic[5] in nature and due to **consanguinity** and **large population**, there is an increased risk of development of rare disease

Government Initiatives

National Policy for Rare Diseases has laid the groundwork for **increased screening** and **faster approvals and funding** for treatment of rare diseases

Socio-Economic Factors

There is **urban rural disparity** causing **skewed detection** of rare diseases however, with **rising income, education** and **insurance coverage**, there is an expected **paradigm shift** in the dynamics

Sources: 1. Estimated due to lack of rare disease registries in India; 2. MoHFW 3. MoHFW; 4. Estimated from PIB; 5. NIH

Case Study | Fortis Memorial Research Institute Thalassemia Center

The Fortis Memorial Research Institute's Thalassemia Center in Gurugram exemplifies a scalable private healthcare model combining specialized care, recurring chronic management revenue, and high-value curative interventions

2012-2013

Fortis Memorial Research Institute inaugurated on 12th October 2012 and became operational in 2013

2014

Celebrated its first anniversary and was won the "Green Hospital" award for friendly design and energy efficiency

2015 - 2019

- Won multiple awards such as DL SHAH Award for surgical safety
- Acquisition of 31.1% stake by IHH Healthcare in 2018

2020-2024

Ranked #34 on Newsweek World's Best Smart Hospitals in 2024 among various other awards

2025- 2026

- Launched Mission 2035 aimed at eliminating Thalassemia
- Inaugurated a dedicated Thalassemia Clinic in Gorakhpur

End-to-End Thalassemia Care

- Regular blood transfusion programs
- Iron Chelation Therapy
- Advanced Diagnostics (Genetic Testing)
- Bone marrow transplant (Curative Option)

Target Patient Pool

- Urban patients (Delhi NCR region)
- Middle to high-income families
- Pediatric patients (majority)
- Some medical tourism inflow

Infrastructure Overview

11	~310	100+	15
Acres campus size	Beds	ICU Beds	State-of-the-art OTs

Key Success Factors

- Its **dedicated disease-specific care model**, enables better patient retention and outcomes
- Strong **specialist-led expertise (hematology + BMT)** builds clinical credibility and supports high-value procedures
- Gurugram provides access to a **high-income and international patient base**
- A **dual revenue model**—recurring chronic care (transfusions, chelation) plus high-ticket BMT—ensures financial sustainability.
- Continuous **demand generation through campaigns** like Mission 2035 and Red Run to End Thalassemia drives patient acquisition and awareness.

Where to Play and How To Win

As we think about your rare disease strategy in the India market, we will use our cascading choices framework to outline the right strategic choices and the financial implications for your market entry into the rare diseases segment

What is our winning aspiration?

- What are your **revenue and profitability aspirations** in India
- What is the **market position aspirations**
- What should your **brand and service offering stand for** in India's rare disease treatment market?

Where will we play?

- Which demographics and rare diseases should we target?
- Which patient groups and services **will form the core proposition of your services**?
- What is the configuration of center that will be required in the diseases that we choose to operate in?

How will we win?

- How should we **position the brand to differentiate itself** in the rare diseases competitive landscape?
- What **pricing** should we adopt to balance affordability, perceived value, and price positioning in its services?
- What does our financials look like for this strategy ?

Proposed Scope of work (1/5)

Proposal 2

A detailed framework to assess the rare disease market and derive business and financial model implications for market entry

Market Assessment of Rare Diseases in India and Identification of Priority Segments for Entry

Phase 1

Module A

- **Conduct a workshop with key personnel of the client to align on their goals for the rare diseases segment and establish key boundary conditions**
  - Align with client stakeholders on strategic objectives for the rare diseases segment, including financial and non-financial goals
  - Define boundary conditions and positioning, including target segment, differentiating factors, and capex considerations

Module B

- **Understand the demand landscape of rare diseases in India**
  - Define and classify rare diseases in the Indian context, and identify 2–3 priority disease areas based on patient pool, market size, and policy focus
  - Assess demand dynamics for shortlisted disease areas, including growth outlook, treatment landscape, per-patient economics, and impact of regulatory initiatives across the patient funnel

Module C

- **Understand the supply landscape of rare diseases in India**
  - Access the types of institutions catering to rare shortlisted rare diseases in India
  - Benchmark select CoEs on infrastructure, service offerings, pricing, payor mix, clinical talent (star doctors), and key success factors
  - Align with the client on the strategic ambition for the rare diseases segment and define key boundary conditions for entry based on the findings

Phase 2

Module D

- **Financial Impact of rare diseases on the hospital financials**
  - Estimate patient volume ramp-up for priority rare-disease segments, and translate these into pricing assumptions and revenue per patient
  - Assess additional capex requirements, along with additional doctor costs, and operating expenses associated with rare diseases

Copyright © 2026 Deloitte Touche Tohmatsu India LLP. All rights reserved.

Proposed Scope of work (2/5)

Proposal 2

A detailed framework to assess the rare disease market and derive business and financial model implications for market entry

Phase 1

Module A — Strategic alignment and objective setting

Scope of Work

- Conduct a **workshop with key personnel of the client** to align on their goals for the rare diseases segment and establish key boundary conditions
- The discussions will cover:
  - **Strategic objectives and expansion goals**, including both financial and non-financial priorities
  - Boundary conditions and management preferences for following:
    - **Target market positioning** (e.g., as premium or value-focused)
    - **Potential differentiating factors/USPs**, such as Rare Disease CoE, patient services, focus specialties, and presence of key clinicians

Key Outcomes

- Align with client to find strategic intent for entering the rare diseases segment
- Understand the target consumer segment and market positioning of the services
- Identification of boundary conditions and management preferences, including capex considerations

Proposed Scope of work (3/5)

Proposal 2

A detailed framework to assess the rare disease market and derive business and financial model implications for market entry

Phase 1

Module B — Understanding Demand landscape of rare diseases in India

Scope of Work

- Establish a **working definition of rare diseases in the Indian context** and develop a classification framework for rare diseases based on clinical domain (e.g. genetic, Hematologic, Neurological, Metabolic, Auto-immune)
- Identify the **top 2–3 rare disease areas for deep dive** across key clinical domains based on patient pool, synergy with oncology, government prioritization, and suitability for long-term/curative therapies, prioritizing platforms with cross-disease scalability
- **Subsequently, undertake a detailed deep dive for the shortlisted areas to assess:**
  - Patient pool segmentation on appropriate factors (age, income groups) and identified drop off assumptions
  - Select available treatments across archetypes (one-time curative, chronic management, High-cost lifelong therapy)
  - Treatment landscape, including available modalities, diagnostics, adoption levels, and emerging therapies (linked to BMT)
  - Per-patient economics and revenue potential
  - 3-to-5-year market growth outlook (by value and volume) for the most prevalent treatment methods
- **Government Initiatives :** Assess key regulatory developments over the past 5–7 years, including the National Policy for Rare Diseases (2021), and evaluate their impact across the patient funnel—from identification to treatment uptake

Key Outcomes

- A working framework for rare diseases in India, including classification across key clinical domains
- Assessment of market growth and treatment landscape of rare diseases in India for shortlisted disease areas

Proposed Scope of work (4/5)

Proposal 2

A detailed framework to assess the rare disease market and derive business and financial model implications for market entry

Phase 1

Module C — Understanding Supply landscape of rare diseases in India

Scope of Work

- **Define and assess** the key types of institutions providing rare disease care in the private segment in India
- **Within identified rare disease areas, identify one leading center of excellence (based on clinical reputation, case volumes, and specialization) for deep dive based on**
  - **Infrastructure benchmarking** (BMT / transplant units, diagnostics labs, ICU / PICU / day-care units, Multidisciplinary clinics)
  - **Serivces offerings** – Diagnostic (genetic testing, screening), Curative (BMT, transplants), Long-term care and rehabilitation
  - **Clinical talent /Star doctor availability –** Identify the key star doctors available in different sub-specialties
  - **Key Success drivers -** Brand, Clinical expertise, presence of star clinicians, infrastructure, referral network
- **Conduct working session with client to outline the implications**
  - Alignment of the client's proposed competitive moat to win in the specific disease area vis-a-vis other competitors
  - Highlight implications emerging from the proposed entry into the 2-3 rare disease segment (Impact on star doctor requirement, infrastructure, service offering and brand creation/positioning)

Key Outcomes

- Understand the archetypes of different types of rare diseases service providers
- Typical profile of leading centers across different archetype

Proposed Scope of work (5/5)

Proposal 2

A detailed framework to assess the rare disease market and derive business and financial model implications for market entry

Phase 2

Module D — Financial Impact of rare diseases on the hospital

Scope of Work

- **Impact of Rare-Disease Segments on financials of the hospital (based on competition volumes and client inputs)**
  - Patient volume ramp-up, and referral funnels
  - Pricing assumptions and revenue per patient, reflecting disease complexity, and treatment pathways
  - Incremental capex requirements (specialized diagnostics, equipment, labs, supporting infrastructure) – based on client inputs
  - Doctor engagement models and associated costs
  - Incremental operating costs (specialized staffing, consumables, diagnostics, therapy support)

Key Outcomes

- Expected volume ramp-up, and revenue potential for each shortlisted rare-disease segment
- Incremental capex requirements and operating costs

Proposed Engagement Team for both proposal 1 and proposal 2

	Deloitte Team	Client Team
LEADERSHIP	 **Ashish Rampuria** *Healthcare and Lifesciences Sector Partner, Monitor Deloitte India*	**VPS Lakeshore**
CORE DELIVERY	 *Associate Director* *Senior Consultant* *Consultant/ Analyst* *Consultant/ Analyst*	***Client SPOC***

Roles and Responsibilities of Deloitte team

Project Leadership

- Provide overall project direction
- Approve recommendations and key findings
- Provide quality assurance and resolve issues
- Assume responsibility for project success

Operating Team

- Manage day-to-day activities
- Set priorities and establish schedules; accountable for timelines and quality of analyses, deliverables & recommendations, highlight challenges
- Schedule and conduct interviews and enable out-reach
- Develop project deliverables and identify & escalate project risks

Note: *The profiles are representative and will be finalized at the time of the start of the engagement based on resource availability*
